

VERISCAN RATING – INFORMATION SECURITY LEVEL TWO

Billerud Karlsborg Mill is revised and verified according to Veriscan Rating – Information Security Level Two

Veriscan Rating standardised information security measurement system, developed by Veriscan Security, is a method that determines an organisation's information security level.

The aim of the measurement system is to serve as a tool for the information security evaluation process within the organisation. Additionally, it can serve to evaluate information interaction between different organisations that have conducted a Veriscan Rating.

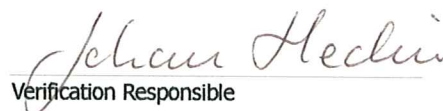

Measurements are granted on a five point scale, the highest being Veriscan Rating 5 and the lowest Veriscan Rating 1. The number of checkpoints as well as the criteria for passing a control increases the higher the Veriscan Rating level.

Each level constitutes a balance of results in three different security areas that together represent the organisation's information security. The three areas are: Logical Security, which includes organisational and administrative checkpoints; Physical Security, comprising checkpoints related to physical protection of operational continuity and against unauthorized access; and System Security, covering checkpoints related to Network, Operating systems and Applications.

To achieve verification, the organisation in question has to be measured by Veriscan Security AB or an independent party, the Verification Body, which has been approved by Veriscan Security AB. This measurement has to be conducted in a specific way, to enable a proper review of the status of an organisation's information security. The Verification is given for the targeted rating level if the summarised measured result in each Security Area has passed the defined criteria set by the Veriscan Rating method.

Veriscan Rating 2 Verification states that the organisation understands the importance of information security. The organisation has enhanced organisational and technical measures in place to handle information security. The Verification of a Veriscan Rating 2 is valid 18 months from its issue date.
